Custom Tokens

Custom Tokens for orders of 5,000 or more.

Put your company's brand and marketing message on every token. All it takes is a 1-time die charge of $195 (per side) and an idea of what you want your token to look like. Save money and use one of our free stock token designs for the back.

We try to make customization as easy as possible. Email your logo and instructions for what the token should look like to tokens@tokensdirect.com. We'll send you a proof for approval in 2 to 3 days.

Production Time for Custom Tokens

Custom tokens ship just 10 business days from when you approve your token design. Re-orders ship in just 5 business days.

Token Materials

Brass tokens *Long lasting brass tokens are perfect for video games, batting cages, parking, self serve car washes, laundromats and amusement operations.*

Nickel Plated Brass Tokens *Durable, bright, silver color plating can be added to any brass token. Bright nickel plating helps tokens stay cleaner and keeps patrons happy. They're also easy to separate visually from brass tokens. Nickel-plated brass tokens work in any coin mech.*

Red Brass Tokens *Designed to work in electronic coin mechanisms and used primarily for Car Wash token applications, red brass tokens have a unique electronic signature, giving operators greater selectivity over the tokens they accept. Using red brass tokens reduces unwanted cross-acceptance with standard brass arcade tokens.*

Copper Plate Zinc Tokens

Copper plated zinc tokens work in most coin mechanisms, but are lighter than regular brass tokens. They're copper colored like a US penny and won't rust. Because of their copper plating, they inherently have anti-microbial properties and are perfect for high "germ traffic" areas like family entertainment centers.

Nickel Silver Tokens

Nickel silver is an entry level high security material and is ideal for operators who don't want to accept other local tokens. With a unique electronic signature, you can set your token mech to reject brass, red brass and even nickel-plated brass.

Aluminum Tokens *Perfect for high-volume entry control applications like fairs, festivals and amusement rides, aluminum tokens are our lowest cost item. For an added charge, they can be produced in long lasting bright colors like blue, red or green. Due to their light weight, aluminum tokens are not recommended for use in electronic or mechanical coin acceptors.*

High Security

Ultimate security for carwash and vending use.

Our Van Brook line offers 3 groups of electronic tokens, each with unique signatures recognized in today's electronic coin acceptors. Extensive testing has been performed in mechs from Parker Engineering, IDX Inc, Ginsan and Magikist. Each token can be reliably distinguished from other types of tokens in circulation.

Controlled Area Distribution – Exclusive to you

Operators wanting a token that no one else uses in their area should choose from one of our CT or CTX products. When you buy CT or CTX tokens, you get an "exclusive use" license within a 75 mile radius as long as you continue to order tokens.

Ultra-high security products called ***CT Tokens***™ *are our most sophisticated tokens and are needed for high-value applications. Hardest to counterfeit, we make them by combining two different metals to produce a unique and highly reliable electronic signature. Used for values from $1 to $14, not a single report of a counterfeit problem has been reported in over 15 years.*

Our high security ***CTX Tokens***™ *are made from special alloys not commonly found in coins or tokens. Each has a unique electronic signature so coin mechs can distinguish them from other tokens. We offer over 15 unique varieties, all available with controlled area distribution exclusivity. They are recommended for values of 50¢ or more.*

Controlled Value – $1 Tokens

Besides our controlled area distribution tokens, you can also choose control value tokens. Called ***TimeSaver Tokens***™*, they come in three sizes and are used exclusively for one dollar vend price. They use a secure metal not seen in coins or tokens.*

Because we process TimeSaver Tokens in very large quantities, we can sell them at lower cost than CTX tokens. They're an economical alternative if you price in $1 increments and you don't want to accept video or other low value tokens.

For security, all controlled distribution tokens must be ordered on our ***High Security Hotline: 1-859-231-7100***

Benefits of Using Tokens

- ***Decrease theft and vandalism***
- ***Re-usable – purchase once, use them for years***
- ***Increased profits through "walkaway" tokens that are sold and not redeemed***
- ***Permanently imprinted with your business name, logo and contact information***
- ***Available stock designs lower costs***
- ***Switching to tokens from quarters is easy***

Company History

Our mission is to sell tokens of great quality and design, quickly and easily, to video game operations, batting cages, parking facilities, car washes, laundromats, FECs, amusement parks, and toy vending machine operators. TokensDirect is a division of Osborne Coinage, a private mint that began producing coins and tokens in Cincinnati, OH in 1835.

After over 180 years of business, TokensDirect knows the process of minting custom and stock tokens that result in crisply detailed impressions with accurate dimensions that exhibit electrical and weight consistency throughout every batch. Our tokens look great, work great, and accept time after time in all standard coin mechanisms.

We have a talented staff of graphic designers on site that can take a rough sketch and turn it into a workable token design. Our self-contained facility encompasses all the operations necessary to mint over 600,000,000 coins and tokens a year.

We're exceptionally proud that we make all our tokens in the USA. We do not import our tokens!
